

## Practical 22 December

- 1) Write a program to print the rightmost digit of an integer input by the user.
- 2) Write a program to print the average marks of a student in 4 subjects and their deviation from the average where the marks of the 4 subjects are input from the user.
- 3) Write a program to calculate the total sale given the unit price, quantity, discount and tax rate. Assume the tax rate to be 8.50. Input unit price, quantity, discount from the user.

Sample run:

```
Enter number of items sold: 34
Enter the unit price: 12.89
Enter the discount rate (percent): 7

Quantity sold: 34
Unit Price of items: 12.89
-----
Subtotal : 438.26
Discount: - 30.68
Discounted total: 407.58
Sales tax: + 34.64
Total sale: 442.23
```
